

Integration Tracking Code

1. Tracking Code Conversion Tracking (required)

The tracking code provided by ADCELL has to be integrated by you on your ordering confirmation page. Please check that the dynamic parameter **referenz** (reference) and **betrag** (amount) are transmitted correctly.

Partnerprogramm: Onlyprint
Event: Bestandskunde
Type: Sale-Event mit Warenkorbübergabe (Einkauf, Bestellung)

Tracking-Code:

```
<script type="text/javascript" async src="https://t.adcell.com/t/track.js?
pid=9315&eventid=12118&referenz=ABC_123&betrag=123.45">
</script>
<noscript>

</noscript>
```

Please copy and paste the tracking code to your ordering confirmation page, which will be shown to the customer after successful registration of the event "Bestandskunde".

Do not forget to customize the parameters **referenz and **betrag** in the tracking code.**

Please transfer a *unique* reference for each transaction with the parameter **referenz** in the tracking code so you can check and manage your commission in the ADCELL-system. (eg. ordering number or customer number). A reference of a transaction should never include sensitive and personal data (such as the mail address, account information, customer name, etc.)

For the parameter **betrag** please just send the net amount of the shopping basket (without shipping costs or sales tax).

Since your campaign has another active event, it is necessary that the tracking code for each event with the corresponding **eventId is integrated on your page. Please note that the entire code must be implemented in each case.**

2. Trackingcode 1st Party Tracking (required)

This Tracking is necessary for a definite identification of users whenever their internet browser suppresses the classical tracking method via cookies (third-party-cookie). This First-Party-Method can be integrated simply and provides you and your affiliates a secure tracking as well without the risk of being blocked by various internet browsers.

The First-Party-Tracking is based on a Javascript which has to be implemented on **every** landing page of your advertising media.

Tracking-Code:

```
<script type="text/javascript" src="https://t.adcell.com/js/trad.js"></script>
<script>Adcell.Tracking.track();</script>
```

We suggest an implementation of the Javascript for example as addition to an appropriate website template. Please note that the tracking only works if the destination URL of your advertising media is located on the same domain as the checkout page, otherwise the evaluation of the First-Party-Cookie is not possible.

With the advertising link, ADCELL transmits the parameters **bid** and **adcref**. These will be appended to the original URL of your page. For example, the link is:

<https://www.IhrShop.de/index.html?bid=XYZ-XYZ-&adcref=www.adcell.de%2Fwerbemittel%2FIhrShop%2Fformat%2Fbanner>

Please ensure that your shop page or website does not use internal redirects that shorten the link and thus cancel the tracking. In this case, exceptions would have to be declared based on the mentioned parameters. Since both parameters are essential for first-party tracking, tracking can not work without them.

Bank details

Institute: Deutsche Bank
IBAN: DE55 1007 0024 0014 9740 00
BIC: DEUTDE33HAN

Firstlead GmbH

local court of Berlin, HRB: 83223
Tax ID: DE219507810
directors: Marcus Seidel, Gregor Janik

Important: After an extension of the tracking, we will test the tracking again to ensure that the tracking is guaranteed.

3. Integration ADCELL container tags (optional)

More than 90% of your users are leaving the online shop without making a purchase. With the implementation of our container tags our display publishers are able to tag this users and bring them back into your online shop.

```
//Home Page:
<script type="text/javascript" src="https://t.adcell.com/js/inlinereTarget.js?method=track
&pid=9315&type=startpage" async></script>

//Category Page:
<script type="text/javascript" src="https://t.adcell.com/js/inlinereTarget.js?method=category
&pid=9315&categoryName=[YourCategoryName]&categoryId=[YourCategoryId]
&productIds=[YourProductIds]&productSeparator=[SeparatorBetweenProductIds]" async></script>

//Product Page:
<script type="text/javascript" src="https://t.adcell.com/js/inlinereTarget.js?method=product
&pid=9315&productId=[YourProductId]&productName=[YourProductName]
&categoryId=[YourCategoryId]&productIds=[YourProductIds]&productSeparator=[SeparatorBetweenProductIds]"
async></script>

//Search Page:
<script type="text/javascript" src="https://t.adcell.com/js/inlinereTarget.js?method=search
&pid=9315&search=[YourSearchString]
&productIds=[YourProductIds]&productSeparator=[SeparatorBetweenProductIds]"></script>

//Basket:
<script type="text/javascript" src="https://t.adcell.com/js/inlinereTarget.js?method=basket
&pid=9315&productIds=[YourProductIds]&productSeparator=[SeparatorBetweenProductIds]
&quantities=[ProductQuantities]&basketProductCount=[NumberProducts]&basketTotal=[Amount]" async></script>

//Bestellabschluss/Purchase:
<script type="text/javascript" src="https://t.adcell.com/js/inlinereTarget.js?method=checkout
&pid=9315&basketId=[OrderId]&basketTotal=[Amount]&basketProductCount=[NumberProducts]
&productIds=[YourProductIds]&productSeparator=[SeparatorBetweenProductIds]&quantities=[ProductQuantities]"
async></script>
```

Notes

- please implement the particular container tags in addition to your tracking code on all pages of your online shop
- please implement the container tags in the <body> tag of your online shop, ideally before the closing </body> tag
- all special characters must be given URL-encoded using UTF-8.

Glossary

type	trackingtype - should not be changed
async	specifies that external scripts and other resources are loaded at the same time
pid	should not be changed
categoryName	passed over category
categoryId	passed over categoryId
productIds	product ID of the displayed product or category. This must be identical to the used productId in your productfeed.
productSeparator	separator between productIds
productName	product name
search	keyword used in the search
quantities	quantity of products per product number (please use a parallel sequence of productIds)
basketProductCount	total number of products in the basket
basketTotal	total net basket
basketId	order number or basketId
